

Make up assignment for the Monday section on Jan 18th.

Read the Ewald paper and answer the questions below. Your responses should be in paragraph form and should be about one page typed in total. You may email me your answers or turn them in at section the following Monday (Jan 25th).

1. How does the virulence of a pathogen effect its transmission? How can increased virulence be a disadvantage to a pathogen?
2. Malaria, HIV, and Cholera are all mentioned as pathogens that have high virulence and high transmission. How they are able to do so?
3. What are some human behaviors that can increase/decrease disease transmission?
4. Imagine you work for the World Health Organization creating health policy recommendations for developing countries. What policies would you recommend based on this paper? Be as specific as possible.
